

How to make this batch

1 • Make the hub

2 • Split the hub — 12 candidates from one intermediate (4 shown)

sEH 8.16

sEH 8.06

sEH 8.00

sEH 7.73

■ purchasable — order it

■ intermediate — make it

■ hub / promoted fragment

■ final candidate

Yields are the reaction library's nominal per-class values, not predictions for these substrates — each step still needs optimising. Scores are the sEH reward the model was trained against.
