

Hub-batching is cheaper per mode under every pricing regime — and the reaction-GFN's own routes stay cheaper than any post-hoc planner recovers

SCENT sEH · diversity cutoff $\tau=0.5$ · mode bar reward >7.0 · panel C = the 4,749-molecule mode union

A Route cost by pricing regime

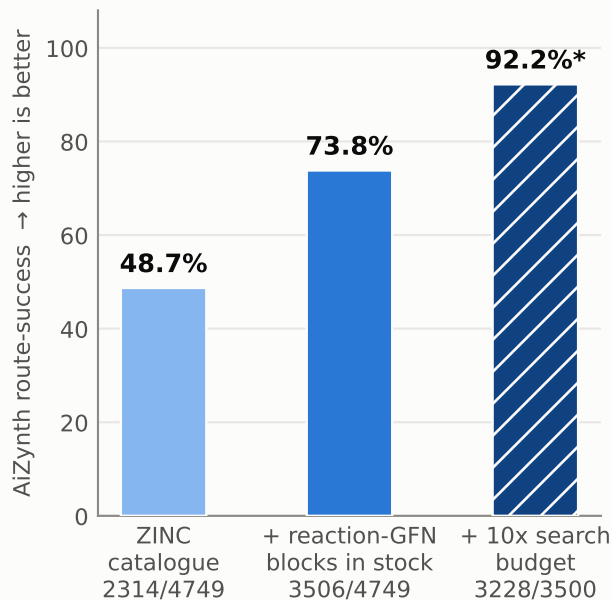

B Coverage: modes a pricer can route

■ hub-batching (free-frag) ■ best-candidate

C Are the molecules makeable?

* partial: 3,228/3,500 molecules routed before the 10 h wall (job 71534); finish run 71765 pending.
