

The residual AiZynth failure is the reaction-GFN's own chemistry in a different terminal form, plus standard reagents — not exotic, unmakeable matter

SCENT sEH · the 42 failures that survive a 10× search budget (Logs/047, job 71428) · 22/43 leaves are its own core

reaction-GFN's own core standard reagent / protecting group other

A What the stubborn leaf actually is

B A handful of species carry most of it
